## SMART METERS NOW!

Utility companies across the UK are not being entirely honest with their customers concerning their new proposed Smart Meter programme. The Smart Meter monitors all of your home energy use, which is then transmitted wirelessly over an insecure network, making your personal data vulnerable to identity theft by hackers and also putting your health at risk.

● **Smart meters may damage your health due to the emission of pulsed microwave radiation, similar to a mobile phone mast inside your house, 24 hours a day. Over 5000 published scientific studies have shown serious harmful effects to people, animals and plants from this type of radiation.**

Effects such as headaches, sleep disorders, fatigue, irritability, nausea, vomiting, dizziness, memory loss and concentration impairment have all been widely reported. *There is no independent scientific study of any kind proving that Smart Meters are safe!*

● **Energy bills have increased by about 40% in the USA, where some Smart Meters have actually exploded and caused fires!** Using the Smart Meter the utility companies will have the power to remotely lower your heating levels without your approval!

● **The Smart Meter is like having a CCTV in your home as it monitors ALL your home energy use.** This is an invasion of privacy, in violation of the Data Protection Act. *They are NOT mandatory and are NOT safe. You have the lawful right to refuse them.*

Visit our website and download our free sticker to place on your current meter, forbidding the installation of a Smart Meter by your energy supplier, or contact them directly to refuse one.

***Smart Meters, there's nothing SMART about them!***
